Preface	
Introduction	
Glossary	
Chapter One Introduction to earth walling: the materials	1
Local terms	1
The classification of soils	2
Clay-based earth walls	2
Chalk walls	3
Wychert	4
Water for mixing	4
Additives	5
Fibre	5
Stabilizers.	5
Chapter Two Methods of construction	8
The traditional method	8
Preliminary work	10
Mixing	10
Building the wall	11
Forming openings	12
Provision for fixings	12
Finishing and protection	13
Allied construction work	15
Local variations	15
Rammed earth	18
Shuttering	19
Filling and ramming	19
Forming openings	21
Stabilized earth	21
Local variations	22
Advantages of rammed earth	26
Twentieth century experiments	25
Conclusion	28
Adobe	29
Faced buildings	31
Local variations	32
Advantages of adobe	33
Puddled earth	34
Twentieth century experiments	34
Timber diaphragm walling	36
Mud and stud buildings	36
'Stake and rice' and its variations	39

Regional distribution of earth buildings	40
Access to buildings open to the public	42
Chapter Three The qualities of earth walling	43
Introduction	43
Moisture content	44
The traditional method	44
Rammed and puddled earth	45
Drying out	45
Plasticity	46
The Atterburg limits	46
Clay and chalk compared	47
Porosity and permeability	49
Definitions	49
Factors affecting the permeability of clay soils	49
Upper Chalk	50
Condensation	50
Thermal insulation	51
The preference for earth	51
Thermal conductivity and resistivity	52
Other factors affecting insulation	53
Thermal admittance	55
Strength	56
Factors affecting strength	56
Weights and compressive strengths	58
Tensile strength	60
Durability	60
Factors affecting durability	60
Chapter Four Repair, alterations and extensions: general principles	66
Introduction	66
The philosophy of repair	67
Alterations, conversions and extensions	71
Alterations to existing buildings to form extra habitable rooms	71
Change of use of agricultural buildings	75
Extensions to existing earth buildings	77
Analysing soils and wall samples	79
Chapter Five Repairs, alterations and extensions: methods	82
The underpin course	82
Repairs to the wall	84
Introduction	84
Low level erosion	85
High level erosion	88
Cracks	98
Rat runs	109
Holes	113
Adobe buildings	114
Mud and stud buildings	115
Case study-Sotby	116
Case study-Billinghay	117

Case study–Bratoft	118
Door and window openings	119
Fixing to earth walls	125
Installation of upper floors	128
Installation of heating systems	130
Installation of damp proof courses and membranes	131
Boundary wall coping details	133
Stabilizing walls	135
Consolidation	153
Fire damage	154
Demolition	155
Chapter Six Wall protection	158
Existing methods of protection	158
Patch repairs to rendering	162
Relieving stresses caused by unsuitable renders	163
External lime-based renders	164
Maintaining the vernacular	165
Introduction	165
Chalk slurries	167
Clay renders	167
Tar	168
Cement-based renders	168
Traditional internal plasters	169
Chapter Seven Wall decoration	170
Introduction	170
Traditional coatings	171
Limewashes and additives	171
Distempers and water paints	174
Cement-based paints	175
Pigments	176
Modern coatings	178
Introduction	178
'Pozament' limewash	179
Internal emulsion paints	180
External masonry paints	180
Silicate paints	182
Permeability tables	183
Wallpapers	183
Chapter Eight Conclusion: the future of earth building	185
Bibliography	192
Appendices	196
Appendix A: Manufacturers and suppliers of specialist building materials	197
Useful names and addresses	198
Appendix B: Equipment hire and contractors for specialist services	199
Index	200
